

04 — Screen Pop, CTI Softphone, and Layouts

Audience: SF Admin, ECC Admin **Purpose:** Make revenue tier, CSM, and account context visible to support agents in real time — during calls and while handling tickets. **Prerequisites:** Fields from [01](#) deployed; Flow from [02](#) active.

1. Three Places Where Tier Needs to Be Visible

Touchpoint	Where	Fires When
CTI Softphone	Top-right corner of Salesforce Console, during active call	Call rings agent (from IVR call context payload)
Case Screen Pop	Case record page opens when call is answered or Case created	Call answered → Case auto-created, OR inbound email-to-case
Case Highlights Panel	Always visible on Case page, not just at pop	Agent opens any Case manually

All three are configured in Salesforce. Nothing to do in ECC beyond passing call context.

2. Compact Layout — Case

Compact Layout controls the fields shown in the **Highlights Panel** at the top of a Case record. It's the first thing an agent sees when opening a Case.

2.1 — Configuration

Path: Setup → Object Manager → Case → Compact Layouts → New

Layout Name: Support Agent — Revenue Aware

Fields (order matters, left-to-right in highlights):

Order	Field	Why it's here
1	CaseNumber	Identity
2	Account_Revenue_Tier_Badge__c (formula — see §2.3)	Immediate tier signal
3	Account.Name	Customer name
4	Priority	Urgency
5	Status	Workflow state
6	Account_RAG_at_Creation__c	Health at creation
7	Account_CSM_Name__c	Who to loop in
8	Age1__c	Ticket age

Assign as Primary Compact Layout for: all support-agent profiles (L1, L2, L3, FLR, TNR profiles)

2.2 — Page Layout Additions

In addition to compact layout, add these fields to the **standard Case page layout** for support profiles in a new dedicated section:

Section name: "Revenue Context" **Position:** Just below the Highlights panel, above the main Case Details section.

Fields (arranged in 2 columns):

Column 1	Column 2
Account_Revenue_Tier__c	Account_CSM_Name__c
Account_RAG_at_Creation__c	Is_Top_Customer__c
Account_LTM_Revenue__c (if built)	Account.Support_Group__c

Hidden on page layout (still on compact layout for highlights): Account_Revenue_Tier_Badge__c — purely display, no need to duplicate.

2.3 — Tier Badge Formula Field on Case

Purpose: Visual shorthand with color-coded emoji/text for fast agent triage.

Attribute	Value
API Name	Account_Revenue_Tier_Badge__c
Label	Tier
Object	Case
Type	Formula (Text)
Length	60

Formula:

```
CASE(Account_Revenue_Tier__c,
  "HYPERCARE", "🔴 HYPERCARE",
  "STRATEGIC", "🟡 STRATEGIC",
  "PREMIUM", "🟢 PREMIUM",
  "UNKNOWN", "🟠 UNKNOWN",
  "STANDARD"
)
```

Emojis render in most Salesforce Lightning contexts. If unreliable, fall back to text-only prefixes ("[!] HYPERCARE", "[] STRATEGIC").*

3. Case Highlights Panel — Visual Design Reference

What the agent sees when a Case opens:

#DCA-0045671  HYPERCARE ACME CORP Critical Open  RED
CSM: Priya Sharma Age: 2 d 14 h 11 m

vs. a Standard ticket:

#DCA-0045672 STANDARD Small Co Pvt Ltd Minor New -
CSM: - Age: 0 d 0 h 3 m

The visual contrast alone —  HYPERCARE vs no badge — drives agent attention without needing training.

4. CTI Softphone Layout

Salesforce Open CTI controls what shows in the **softphone panel** (top-right of Console) during an active call. The Exotel CTI adapter is already installed; we update the softphone layout.

4.1 — Configuration

Path: Setup → Softphone Layouts → New

Layout Name: Support Agent — Revenue Aware

4.2 — Inbound Call Display (before Case is created)

During ringing / active call, before a Case exists, the softphone shows:

 Inbound Call
+91 98765 43210

 HYPERCARE
ACME CORP
RAG:  RED
CSM: Priya Sharma

[Create Case] [Open Account]
[View Open Tickets]

4.3 — Call Context Payload → Softphone Display Mapping

The IVR call context payload (see [03 §4.2 Node 7](#)) maps to softphone fields:

Call Context Variable	Softphone Display
support_tier	Tier badge (top line, colored)
account_name	Customer name (second line, bold)

rag_status	RAG icon + color (third line)
csm_name	CSM name (fourth line)
caller_number	Caller phone (standard CTI display)
lookup_source	Hidden — emit as debug/audit only

4.4 — Screen Pop Behavior

Configure screen pop behavior per call disposition:

Scenario	Screen Pop
Inbound call, matched Account with open Cases	Pop the most recent open Case for that Account
Inbound call, matched Account with no open Cases	Pop a new Case create page pre-filled with AccountId, Priority based on tier
Inbound call, no Account match	Pop a search screen with caller number pre-filled
Outbound call	No screen pop (agent typically initiates with context already loaded)

4.5 — Pre-filled Fields for "Create Case" Action

When agent clicks **Create Case** from softphone:

```
Case.AccountId      = <matched account id from IVR>
Case.Priority       = IF(tier == 'HYPERCARE', 'Critical',
                        IF(tier == 'STRATEGIC', 'Major',
                           IF(tier == 'PREMIUM', 'Major', 'Minor'))))
Case.Origin         = 'Phone'
Case.Exotel_CTI__Call_Sid__c = <from CTI>
Case.Exotel_CTI__From__c   = <caller number>
Case.Exotel_CTI__Call_Duration__c = <from CTI>
```

The Flow in [02](#) re-validates the tier at save time and stamps `Account_Revenue_Tier__c` .

5. Quick Actions on Case — For Tier-Aware Workflows

Add these quick actions to the Case page layout for Strategic/Hypercare workflows.

5.1 — "Notify CSM" Quick Action

Type: Chatter post **Trigger button label:** Notify CSM **Effect:** Posts a Chatter message mentioning the Account CSM (from `Account_CSM_Name__c`) on the Case feed:

```
@{Account_CSM_Name__c} – new {Account_Revenue_Tier__c} ticket from {Account.Name}:
{Subject}
```

Useful for L1 agents handling Strategic tickets who want to loop in CSM proactively.

5.2 — "Escalate to L3" Quick Action

Type: Update Record action **Fields updated:**

- `OwnerId` → L3 Escalation Queue
- `Status` → Open
- `Escalation_Level__c` → 1

Visible only when: `Account_Revenue_Tier__c` IN ('HYPERCARE', 'STRATEGIC') (via Lightning dynamic action conditions)

5.3 — "Add to CSM Watch" Quick Action

Type: Create Chatter follow **Effect:** Adds the Account CSM as a follower on the Case so they see all updates.

6. List Views for Agents — Filtered by Tier

6.1 — "My Hypercare Tickets"

Filter:

```
OwnerId = CURRENT_USER
Status NOT IN ('Close_successful', 'Close_unsuccessful', 'Closed')
Account_Revenue_Tier__c = 'HYPERCARE'
```

Pinned at top of Case list view for all Support profiles.

6.2 — "My Strategic Tickets"

Same as above with tier = STRATEGIC.

6.3 — "All Open Tier 1+ (Team)"

Filter:

```
OwnerId IN (Hypercare Support Queue, Strategic Support Queue)
Status NOT IN ('Close_successful', 'Close_unsuccessful', 'Closed')
```

Visible to L2/L3 team leads and managers for team-wide visibility.

6.4 — "Aging Strategic Tickets > 24h"

Filter:

```
Account_Revenue_Tier__c IN ('HYPERCARE', 'STRATEGIC')
Status NOT IN ('Close_successful', 'Close_unsuccessful', 'Closed')
CreatedDate <= LAST_N_HOURS:24
```

Supervisor view for SLA management.

7. Dashboard Components

7.1 — Tier Distribution — Open Tickets

Report type: Cases **Filter:** Status NOT IN ('Close_successful', 'Close_unsuccessful', 'Closed') **Grouping:** Account_Revenue_Tier__c **Visualization:** Horizontal bar chart

7.2 — Tier Distribution — Tickets Created (This Month)

Filter: CreatedDate = THIS_MONTH **Grouping:** Account_Revenue_Tier__c, sub-grouping: RecordType.Name **Visualization:** Stacked column chart

7.3 — SLA Compliance by Tier

Filter: ClosedDate = LAST_N_MONTHS:3 **Grouping:** Account_Revenue_Tier__c **Metrics:**

- Avg First_Response_Time__c
- Avg Resolution_Time_Minutes__c
- % with SLA_Violated__c = FALSE

Add to a new "Revenue-Aware Support" dashboard pinned on the Support team home page.

8. Conditional Formatting — Lightning Page

On the Case Lightning Record Page, use **Dynamic Visibility** to conditionally show/hide components based on tier.

8.1 — Hypercare Banner Component

Add a Rich Text component at the top of the Case page:

```
<div style="background: #d04124; color: white; padding: 12px; border-radius: 6px; font-weight: bold;">  
  🚨 HYPERCARE ACCOUNT – Escalate immediately to L3 if not resolved within 2 hours.  
  Notify CSM {!Case.Account_CSM_Name__c} for status.  
</div>
```

Dynamic visibility filter: Account_Revenue_Tier__c = "HYPERCARE"

8.2 — Strategic Reminder Component

Add a Rich Text component:

```
<div style="background: #fff4bc; padding: 8px; border-left: 4px solid #f5a623;">  
  ⭐ STRATEGIC ACCOUNT – CSM {!Case.Account_CSM_Name__c} should be kept in loop on  
  all updates.  
</div>
```

Dynamic visibility filter: Account_Revenue_Tier__c = "STRATEGIC"

8.3 — CSM Activity Tab

Add a related list showing recent Activities/Events on the Account where Owner = Account_CSM. Gives agent context on what CSM has been doing.

Dynamic visibility filter: `Account_Revenue_Tier__c IN ("HYPERCARE", "STRATEGIC", "PREMIUM")`

9. Agent Training — One-Pager

A one-page reference for agents on what the tier badges mean and expected behavior.

Badge	What to do first	SLA target
 HYPERCARE	Acknowledge within 15 min, post Chatter @CSM, escalate to L3 if blocked	2 hr response / 8 hr resolution
 STRATEGIC	Acknowledge within 30 min, keep CSM informed of status changes	4 hr response / 24 hr resolution
 PREMIUM	Acknowledge within 1 hr, standard escalation if needed	4 hr response / 24 hr resolution
(STANDARD)	Standard FLR workflow	Standard SLA
 UNKNOWN	Confirm Account, then re-evaluate priority	Standard SLA

Pin this in the Support Team Chatter group + include in new-hire onboarding.

10. Accessibility & Edge Cases

Concern	Handling
Agents using screen readers	Emoji badges should also have text labels ("Hypercare Account", not just ). Formula field already includes text.
Browser font doesn't render emojis	Fallback: configure text-only variant of <code>Account_Revenue_Tier_Badge__c</code> via a org-wide user preference or profile-level switch
Compact layout space constraints	Maximum 6–8 fields in compact layout. If adding more, remove <code>CaseNumber</code> (shown in page header anyway)
Tier changes mid-ticket	Creation-time tier (<code>Account_RAG_at_Creation__c</code> , <code>Account_Revenue_Tier__c</code>) is preserved. Agent can manually check current Account tier via related list.
CSM changes mid-ticket	<code>Account_CSM_Name__c</code> on Case is stamped at creation. If CSM changes, Case still shows original CSM. Add a formula field on Case that pulls current CSM: <code>Account_CSM_Current__c = Account.Account_CSM__r.Name</code>

11. Deployment Checklist

- ☐ Compact layout `Support Agent — Revenue Aware` created and assigned to support profiles
- ☐ Page layout "Revenue Context" section added for support profiles
- ☐ `Account_Revenue_Tier_Badge__c` formula field deployed
- ☐ Softphone layout updated with tier display and pre-filled Create Case action
- ☐ Screen pop rules configured in Open CTI settings

- ☐ Quick Actions: Notify CSM, Escalate to L3, Add to CSM Watch deployed
 - ☐ 4 list views created (My Hypercare, My Strategic, Team Open Tier 1+, Aging Strategic)
 - ☐ Hypercare / Strategic conditional banner components added to Case Lightning Record Page
 - ☐ Dashboard with 3 tier reports pinned on Support team home
 - ☐ Agent training one-pager published in Chatter Support Team group
 - ☐ UAT with 5+ agents across all tiers (see [06](#))
-

12. Open Questions for SF Admin / UX

1. Should `Account_CSM_Name__c` stamp at creation-time only, or also have a `Account_CSM_Current__c` formula that auto-updates? *Recommendation: both — stamp + formula.*
2. Should Hypercare banner also email the CSM on Case creation? *Recommendation: Yes, via separate After-Save flow. Out of scope for v1.*
3. Which profiles get the new compact layout? Only support profiles, or CSM profiles too? *Recommendation: Support profiles only initially; CSMs see Accounts, not Cases as primary workflow.*
4. Should tier badges be clickable (filter list view)? *Recommendation: No for v1. Global search works.*
